

**Refresh and stimulate at  
low cost and high impact**

Revitalising assets to encourage learning is always right.

Our **refresh strategy** is a low cost option to obtain the maximum out of an asset life-cycle.

Colour and texture with minor modifications with enhanced specification for lighting revitalises the learning environment.

### What we do

#### Creative solutions for existing spaces

Simple minimal intervention yet creative solutions encourage enthusiasm, motivation and productivity. We focus on impact with colour and texture and innovation with furniture and equipment to maximise functionality without structural change.

#### Conserve and use energy efficiently

Its surprising how much a minimal intervention can save energy and reduce carbon footprints. We reduce lamp sizes and introduce alternative lamp sources. Replaced inefficient diffusers and filters brighten appearances and provide better environments.

#### Continuity of operations

Phased, consequential works to avoid unnecessary disruption to the learning environment.

#### Increase operational performance

Improving usage and existing infrastructure of existing educational spaces to suit building standards  
A working environment conducted within a more effective and naturally illuminated space.

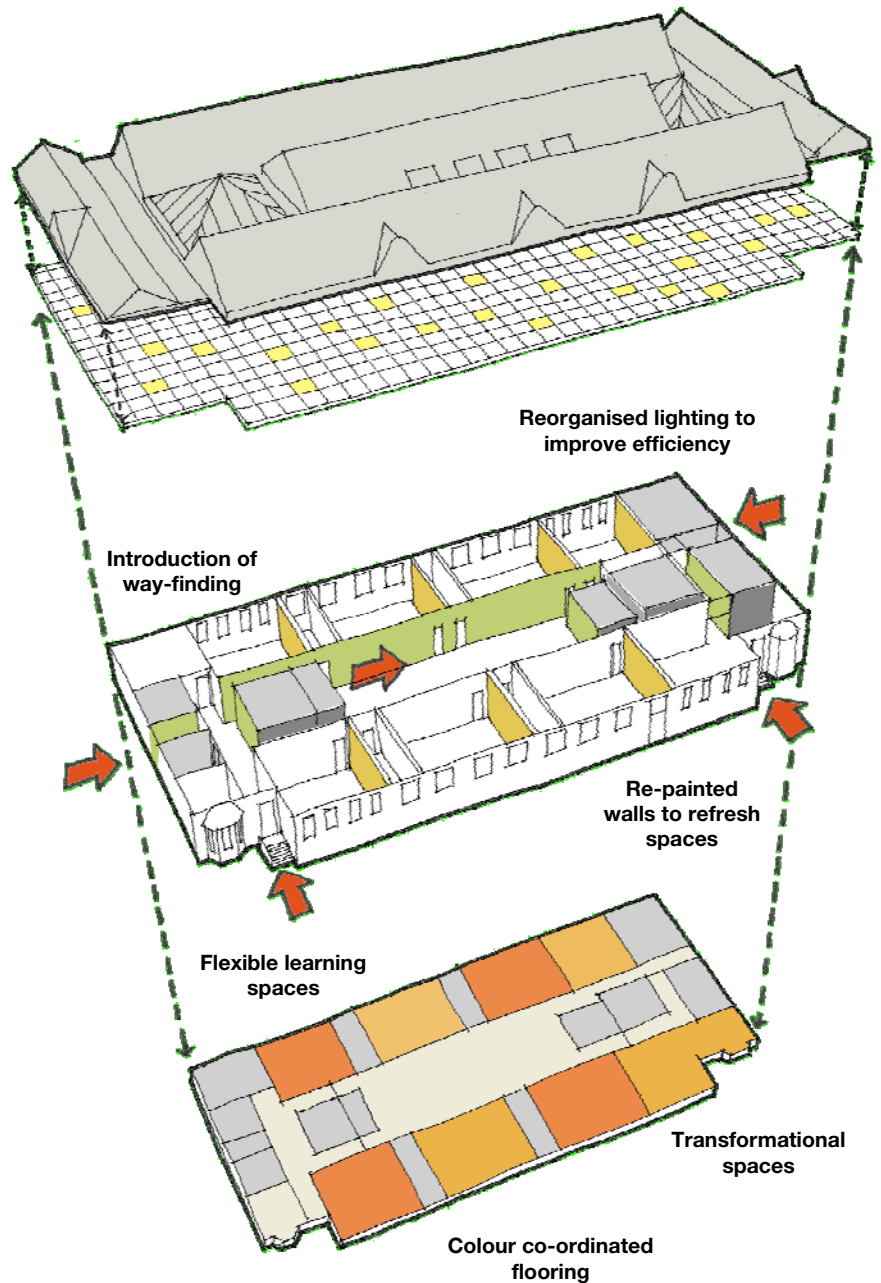

#### Designing for future generations

Encouraging the use of BREEAM, CEEQUAL, Green Specification of materials, Low Carbon design to drive sustainable buildings of the future.

Private  
and public
